# Integrated Traffic Monitoring System

Transform traffic data into information

### Sustainable deployment

Standalone operation using solar and wind renewables and advanced fuel cells for critical system backup. Easy installation and low maintenance.

### Multi sensor integration

- Vehicle counting and classification across five lanes
- Average speed detection
- Road occupancy
- Diverse communication
- Current weather sensing (visibility, windspeed, rainfall, temperature, etc.)
- Visual verification.

### Powerful reporting and analysis

- Common sensor database
- Graphing and correlation of recorded data
- Configurable thresholds and triggers
- Data viewed through a standard browser
- Integration with existing control systems.
